

Radiant Plus GSB2 (AU) Small Inbuilt

- Direct Vent Fireplace Insert
- Masonry or Factory Built (Metal) Wood-Burning Fireplace
- Residential or Mobile Home

WARNING: If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

- **DO NOT PLACE ARTICLES ON OR AGAINST THIS APPLIANCE.**
 - **DO NOT USE OR STORE FLAMMABLE MATERIALS NEAR THIS APPLIANCE.**
 - **DO NOT SPRAY AEROSOLS IN THE VICINITY OF THIS APPLIANCE WHILE IT IS IN OPERATION.**
 - **DO NOT MODIFY THIS APPLIANCE.**
 - Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- WHAT TO DO IF YOU SMELL GAS**
- Do not try to light any appliance.
 - Do not touch any electrical switch; do not use any phone in your building.
 - Immediately call gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
 - If you cannot reach your gas supplier, call the fire department.
 - Installation and service must be performed by a qualified installer, service agency or the gas supplier.

This appliance may be installed in an aftermarket permanently located, manufactured home (USA only) or mobile home, where not prohibited by local codes.

This appliance is only for use with the type(s) of gas indicated on the rating plate. A conversion kit is supplied with the appliance.

WARNING

**HOT GLASS WILL
CAUSE BURNS.
DO NOT TOUCH GLASS
UNTIL COOLED.
NEVER ALLOW CHILDREN
TO TOUCH GLASS.**

Installation Manual

Installer: After installation give this manual to the home-owner and explain operation of this heater.

Dragon Wholesaling Pty. Ltd.
Unit 4, 16 Lexington Drive
Bella Vista NSW
Australia 2153

Introduction

We welcome you as a new owner of a Radiant Insert. In purchasing this fireplace insert you have joined the growing ranks of concerned individuals whose selection of an energy system reflects both a concern for the environment and aesthetics. It is one of the finest home heaters the world over. This manual will explain the installation, operation, and maintenance of this heater. Please familiarize yourself with the Owner's Manual before operating your heater and save the manual for future reference. Included are helpful hints and suggestions that will make the operation and maintenance of your new heater an easier and more enjoyable experience. We offer our continual support and guidance to help you achieve the maximum benefit and enjoyment from your heater.

Important Information

No other Radiant Insert has the same serial number as yours. The serial number is attached to the appliance near the gas control valve.

This serial number will be needed in case you require service of any type.

Model: Radiant Plus GSB2 Small

- Failure to follow all of the requirements may result in property damage, bodily injury, or even death.

Young children should be carefully supervised when they are in the same room as the appliance. Toddlers, young children and others may be susceptible to accidental contact burns. A physical barrier is recommended if there are at risk individuals in the house. To restrict access to a fireplace or stove, install an adjustable safety gate to keep toddlers, young children and other at risk individuals out of the room and away from hot surfaces.

Children and adults should be alerted to the hazards of high surface temperature and should stay away to avoid burns or clothing ignition. Do not touch the hot surfaces of the heater. Educate all children of the danger of a high-temperature heater.

Due to the high temperature, the heater should be located out of traffic and away from furniture and draperies.

- This unit must be installed by a qualified installer to prevent the possibility of an explosion.
- This appliance must be installed in accordance with all local codes, if any; if not, in U.S.A. follow ANSI Z223.1 and NFPA 54(88), in Canada follow CSA B149.1. In Australia follow AS/NZS 5601.1.
- A manufactured home (USA only) or mobile home OEM installation must conform with the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, or, when such a standard is not applicable, the Standard for Manufactured Home Installations, ANSI/NCSBCS A225.1, or Standard for Gas Equipped Recreational Vehicles and Mobile Housing, CSA Z240.4. This appliance may be installed in Manufactured Housing only after the home is site located.
- All exhaust gases must be vented outside the structure of the living-area. Combustion air is drawn from outside the living-area structure. The venting must not be connected to a chimney flue serving a separate solid-fuel burning appliance.
- Notify your insurance company before hooking up this fireplace.
- The instructions in this manual must be strictly adhered to. Do not use makeshift methods or compromise in the installation. Improper installation will void the warranty and safety listing.
- This heater is approved for use with natural gas (NG) or propane (LP). Burning the incorrect fuel will void the warranty and safety listing and may cause an extreme safety hazard. Direct questions about the type of fuel used to your dealer.
- Contact your local building officials to obtain a permit and information on any installation restrictions or inspection requirements in your area.
- If the flame becomes sooty, dark orange in color, or extremely tall, do not operate the heater. Call your dealer and arrange for proper servicing.
- It is imperative that control compartments, screens, or circulating air passageways of the heater be kept clean and free of obstructions. These areas provide the air necessary for safe operation.
- Do not operate the heater if it is not operating properly in any fashion or if you are uncertain. Call your dealer for a full explanation of your heater and what to expect.
- Do not store or use gasoline or other flammable liquids in the vicinity of this heater.
- Do not operate if any portion of the heater was submerged in water or if any corrosion occurs. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

Safety Warnings (continued)

- Because this heater can be controlled by a thermostat there is a possibility of the heater turning on and igniting any items placed on or near the appliance.
- Light the heater using the built-in igniter. Do not use matches or any other external device to light your heater.
- Never remove, replace, modify or substitute any part of the heater unless instructions are given in this manual. All other work must be done by a trained technician. Don't modify or replace orifices.
- The viewing glass should be opened only for conducting service.
- Allow the heater to cool before carrying out any maintenance or cleaning.
- Operate the heater according to the instructions included in this manual.
- If the main burners do not start correctly turn the gas off and call your dealer for service.
- This unit is not for use with solid fuel.
- Do not place anything inside the firebox (except the optional artwork).
- **Warning:** Do not operate appliance with the glass front removed, cracked or broken. Replacement of the glass should be done by a licensed or qualified service person.
- Do not throw this manual away. This manual has important operating and maintenance instructions that you will need at a later time. Always follow the instructions in this manual.
- Instruct everyone in the house how to shut gas off to the appliance and at the gas main shutoff valve. The gas main shutoff valve is usually next to the gas meter or propane tank and requires a wrench to shut off.
- A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.
- If the barrier becomes damaged, the barrier shall be replaced with the manufacturer's barrier for this appliance.
- Clothing or other flammable material should not be placed on or near the appliance.
- Any safety screen, guard, or barrier removed for servicing an appliance must be replaced prior to operating the appliance.
- Installation and repair should be done by a qualified service person. The appliance should be inspected before use and at least annually by a professional service person. More frequent cleaning might be required due to excessive lint from carpeting, bedding material, et cetera. It is imperative that control compartments, burners, and circulating air passageways of the appliance be kept clean.
- **Travis Industries, Inc. grants no warranty, implied or stated, for the installation or maintenance of your heater, and assumes no responsibility of any consequential damage(s).**

SAFETY WARNINGS:

- **DO NOT PLACE ARTICLES ON OR AGAINST THIS APPLIANCE.**
- **DO NOT USE OR STORE FLAMMABLE MATERIALS NEAR THIS APPLIANCE.**
- **DO NOT SPRAY AEROSOLS IN THE VICINITY OF THIS APPLIANCE WHILE IT IS IN OPERATION.**
- **DO NOT MODIFY THIS APPLIANCE.**
- **THIS INSTALLATION MUST CONFORM WITH THE FOLLOWING:**
 - Manufacturer's Installation instructions
 - Local Gas Fitting Regulations
 - Municipal Building Codes,
 - Refer to AS/NZS 5601.1 for Gas Installations.
 - S.A.A. Wiring Code
 - Local Electrical Regulations
 - Any other statutory regulations
- **NOT SUITABLE FOR MARINE USE.**
- **NOT INTENDED FOR FIREPLACE INSERT.**
- **APPLIANCES INCORPORATING A LIVE FUEL EFFECT, AND DESIGNED TO OPERATE WITH LUMINOUS FLAMES, MAY EXHIBIT SLIGHT CARBON DEPOSITION.**

Features

- Works During Power Outages (battery backup system)
- Blower Optional
- Standing or Intermittent Pilot
- Convenient Operating Controls
- Variable-Rate Heat Output

Installation Options

- Residential or Mobile Home
- Fireplace Insert
- Masonry or Factory Built (Metal) Wood-Burning Fireplace
- Natural Gas or Propane

Heating Specifications

	Natural Gas	Propane
Approximate Heating Capacity (in square meters)*	19-89	19-89
Maximum BTU Input (MJ/H)	19.5	19.5

* Heating capacity will vary with floor plan, insulation, and outside temperature.

Dimensions**Electrical Specifications (for optional blower)**

Blower Electrical Rating 240 Volts, 50 Hz, Max. 0.55 Amps

Fuel

This heater is shipped in natural gas (NG) configuration but may be converted to use propane (LP) using a conversion kit (orifices are included, LP regulator is purchased separately).

Installation Warnings

- Failure to follow all of the requirements may result in property damage, bodily injury, or even death.
- This heater must be installed by a qualified installer who has gone through a training program for the installation of direct vent gas appliances.
- The installation must conform with local codes or, in the absence of local codes, with the National Fuel Gas Code, ANSI Z223.1/NFPA 54, or the National Gas and Propane Installation Code, CSA B149.1..
- In Manufactured or Mobile Homes must conform with Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, or, when such a standard is not applicable, the Standard for Manufactured Home Installations, ANSI/NCSBCS A225.1. This appliance may be installed in Manufactured Housing only after the home is site located.
- The heater is designed to operate on natural gas, or propane (LP).
- All exhaust gases must be vented outside the structure of the living-area. Combustion air is drawn from outside the living-area structure.
- Notify your insurance company before hooking up this heater.
- The requirements listed below are divided into sections. All requirements must be met simultaneously. The order of installation is not rigid – the qualified installer should follow the procedure best suited for the installation.

Packing List

- | | |
|--|---|
| • Propane (LP) Orifices and Regulator | • "Fireplace Altered" tag (attach to the fireplace) |
| • Log Set (includes embers, rock wool) | • (4) AA Batteries |

Additional Items Required

- Faceplate (surround panel may be needed for certain applications)
- Vent/Intake Equipment (see "Vent Requirements")
- Gas Line Equipment (shutoff valve, pipe, etc.)

HINT – USE A LONG FLEX LINE IF USING A BLOWER:

If using the optional blower, use a long flex line when attaching the insert. This will allow service personnel to pull the insert forward and access the blower from behind for cleaning.

Order of Installation

- 1 If the heater is to use propane, install the propane conversion kit (see page 41).
- 2 Install gas line into the fireplace (do not connect to unit).
- 3 Position the heater.
- 4 Connect the gas line and gas vent to the appliance.
- 5 Install the optional surround panels.
- 6 Follow the instructions under "Finalizing the Installation" on page 30.

Fireplace Requirements

- Insert must be placed within a code-conforming masonry fireplace or tested and listed factory-built (metal) wood-burning fireplace. Repair any fireplace damage prior to installation.
- Because the insert may use an optional circulation blower, clean the fireplace, smoke shelf, and chimney prior to installation.
- This heater may be placed in a bedroom. Please be aware of the large amount of heat this appliance produces when determining a location.

Fireplace Sizing	
(a) Minimum Height	17-3/8" (442mm)
(b) Minimum Width	24" (610mm)
(c) Minimum Depth	13-1/4" (337mm)
(d) Hearth Extension	0" (0mm)

- (e) The gas line should be installed prior to installing the heater.
- (f) For tight fits (under 28") see the section "Removing the Vent Connector"
- (g) See "Leveling Legs" for details on leveling the heater.
- (h) Fireplace Converted Tag (see details below)

Fireplace Converted Tag

The fireplace must be permanently marked to indicate that it has been altered and is no longer suitable for burning solid fuel (wood) unless the removed parts are replaced and the fireplace fully inspected and approved. Attach the "This fireplace has been converted..." tag to the fireplace (use two screws or other suitable method). You may wish to place it in a location where it will be covered by the surround panels or face.

WARNING: This fireplace has been converted for use with a fireplace insert and cannot be used for burning wood or solid fuels unless all original parts have been replaced and the fireplace re-approved by the authority having jurisdiction. 0530

Factory-Built (Metal) Wood-Burning Fireplace Requirements

The damper ("A") and grate (with log set) ("B") must be removed (see the illustration below).

The smoke shelf ("C"), internal baffles ("D"), screen ("E"), masonry lining or refractory ("G" & "I"), and metal or glass doors ("F") may be removed (if applicable).

The insulation ("H"), and any structured rigid frame members must not be removed or altered (side and top of door frame, side and top of the face of the fireplace, metal sides, etc.).

The metal floor ("J") of the firebox may be removed in certain cases*.

The fireplace must be permanently marked to indicate that it has been altered and is no longer suitable for burning solid fuel (wood), unless the removed parts are re-installed. Cutting of any sheet metal parts is prohibited. If using the optional surround panel, make sure it does not block any ventilation openings on the fireplace.

***CAUTION:** Firebox floor removal is not covered under the appliance safety standard (ANSI Z21.88 CSA 2.33) used in the safety certification of this appliance, however, this method has been tested by Travis Industries and it has been determined to be safe following the instructions below. Before installing the appliance using this method, contact the Authority Having Jurisdiction to determine if this installation is acceptable in your area. The sheet metal base (or metal wrap) of the fireplace must be left in place.

If the factory-built fireplace has no gas access hole(s) provided, an access hole of 1-1/2" (38mm) or less may be drilled through the lower sides or bottom of the firebox in a proper workmanship like manner. This access hole must be plugged with non-combustible insulation after the gas supply line has been installed.

Hearth Requirements

The heater and face must not contact combustible surfaces. A non-combustible hearth extension is not required. However, if the heater is installed next to the floor, we recommend a hearth to protect the flooring surface from discoloration or other negative impact from the heater.

Leveling Legs

This heater includes front and rear leveling legs to accommodate fireplaces with a step-down firebox.

Electrical Requirements

- Route the power cord out in front of the appliance.
- Plug the power cord into a grounded 240 Volt outlet (do not remove the grounding pin).
- The electrical connection may also be made using the optional Wiring Kit (SKU 97200315).
- The appliance, when installed, must be electrically grounded in accordance with local codes.

Clearances

Due to the high temperature of the heater, it should be located out of traffic and away from furniture and draperies.

	Minimum Clearances
k Sidewall to Insert	5" (127mm)
l Side Facing (non-combustible)	5" (127mm)
m Top Facing (non-combustible)	33" (839mm)
n Mantel* (combustible or non-combustible)	34" (864mm) – for Max. 12" (305) Mantel 33" (839mm) – for Max. 4" (102) Mantel
x Hearth Extension	0" (0mm)

* The combustible area above the non-combustible facing must not protrude more than 3/4" (20mm) from the facing. If it does, it is considered a mantel and must meet the mantel requirements listed in this manual.

Mantel Requirements

The maximum mantel depth is 12" (305mm).

Gas Line Requirements

- The gas line must be installed in accordance with all local codes and the requirements listed below. In the absence of local codes, follow ANSI 223.1 in US/Canada or AS/NZS 5601.1 in Australia.
- A manual shutoff valve is required within 3' (914mm) of the heater. It should be placed upstream of the flex line (if used) and may be installed behind the access door inside the heater.).
- The heater and gas control valve must be disconnected from the gas supply piping during any pressure testing of that system at test pressures in excess of 1/2 psig (3.44 kPA). For pressures under 1/2 psig (3.44 kPA), isolate the gas supply piping by closing the manual shutoff valve.
- Leak test all gas line joints and the gas control valve prior to and after starting the heater.
- This heater is designed either for natural gas or for propane (but not for both). Check the sticker on the top of the gas control valve to make sure the correct fuel is used (see illustration on page 4).
- Installation must be performed by a qualified installer, service agency or the gas supplier (In Massachusetts a licensed plumber/gasfitter).

Gas Line Location

- The gas inlet accepts a 1/2" MPT.

Gas Pressure	Max. Input Pressure	Min. Input Pressure	Max. Manifold Pressure	Min. Manifold Pressure
Natural Gas	7" W.C. (1.74 kPA)	4.54" W.C. (1.13 kPA)	3.8" W.C. (0.95 kPA)	1.1" W.C. (0.27 kPA)
Propane	13" W.C. (3.23 kPA)	11" W.C. (2.74 kPA)	11" W.C. (2.74 kPA)	2.9" W.C. (0.72 kPA)

- If the pressure is not sufficient, make sure the piping used is large enough, the supply regulator is adequately adjusted, and the total gas load for the residence does not exceed the amount supplied.
- The supply regulator (the regulator that attaches directly to the residence inlet or to the propane tank) should supply gas at the suggested input pressure listed above. Contact the local gas supplier if the regulator is at an improper pressure.

Directions for Connecting a Gas Pressure Test Gauge

The gas control valve (shown to the right) has two test ports for testing input (line pressure) and output (manifold) pressure. Loosen the brass screw on either test port and place a 5/16" i.d. rubber or plastic tube over the tapered test port. Connect the tube to the test gauge.

WARNING: The brass screw must be tightened after testing to prevent gas leakage.

Vent Requirements

Travis Industries manufactures a vent kit specifically for this insert (sku 96200330). It includes 30' (10M) of vent, hose clamps, and a prairie cap. The flashing on the cap is 18" (458mm) by 18" (458mm).

- The gas appliance and vent system must be vented directly to the outside of the building, and never be attached to a chimney serving a separate solid fuel or gas-burning appliance. Each direct vent gas appliance must use its own separate vent system.
- Make sure the exhaust pipe on the heater connects to the exhaust portion of the cap. The illustrations below show how the flex liners should be attached.
- The exhaust vent must reline the entire length of the chimney and terminate above the chimney top.
- Be careful not to crimp or rupture the liner when bending it into chimney offsets.
- When installed, the vent must meet all of the vent manufacturer's requirements.
- Use the following vent:
 - 3" UL 441 or 1777 Gas Liner for Exhaust and Air Inlet
 - Duravent Chimney Liner Termination (use one of the two listed below):
 - Prairie Cap with Flashing (included in kit shown above)
 - 3" & 3" Co-Linear to 6-5/8" Co-Axial Adapter, Flashing, & High-Wind Vertical Cap

Vent Terminations Must Comply with AS/NZS 5601.1

Altitude Considerations

- This heater has been tested at altitudes ranging from sea level to 4,500 feet (1,372 M). In this testing we have found that the heater, with its standard orifice, burns correctly with just an air shutter adjustment.
- Failure to adjust the air shutter properly may lead to improper combustion which can create a safety hazard. Consult your dealer or installer if you suspect an improperly adjusted air shutter.

Extended Baffle (for vent configurations over 6 meters tall)

This insert is shipped with the standard baffle installed. If the vent run exceeds 6 meters, replace the standard baffle with the included extended baffle.

- For vent runs up to 6 meters – The stock baffle is used so no change is need.
- For vent runs 6 meters or greater – use the extended baffle AND set the exhaust restrictor between 4 and 5 (see below for details).

Stock Baffle**Extended Baffle****Installation of the Extended Baffle**

1. Loosen the three screws on the ceiling of the firebox that secure the stock baffle (two in the front and one centered in the rear).
2. Slide the baffle forward so the slotted tabs disengage from the screws loosened in the previous step.
3. Tighten the rear screw but leave the front two loose.

4. Move the restrictor to between the #4 and #5 position (see below).

Loosen the 2 screws on the exhaust restrictor. Slide the restrictor to the correct restrictor position then tighten the screws to secure the restrictor.

5. Locate the (2) rear screws in the ceiling of the firebox. Loosen the screws.
6. Install the extended baffle. Slide the (4) slotted tabs on the extended baffle over the screws loosened in the steps 1 and 4.
7. Tighten the screws to secure the baffle.

Vent Restrictor

WARNING: Restrictor adjustment should only be done by a qualified installer.

Most installations do not require vent restrictor adjustment. Only those installations determined to be over-drafting require adjustment. The best indication of over-drafting is a hyper-active flame pattern (flames move too quickly). This is most common in tall vent configurations. Over-drafting may affect the pilot, but this is not the best way to determine over-drafting.

More importantly, **do not over-restrict the insert.** This leads to ghosting or lifting flames, a very unstable condition for both the burner and pilot. Reduce the restrictor setting if this occurs.

If restrictor adjustment is required, make sure to make the adjustment one step at a time. Wait a minimum of 5 minutes after burner ignition to monitor flame quality.

Restrictor Adjustment

The restrictor is adjusted by loosening the two screws holding it in place. Slide the restrictor until the correct notch falls over the screws and re-tighten. Replace the baffle.

Loosen the 2 screws on the exhaust restrictor. Slide the restrictor to the correct restrictor position then tighten the screws to secure the restrictor. In this illustration, the restrictor in position 2.

Vent Installation

Secure the vent to the fireplace insert and termination kit using screws.

Vent Location

Vent Configurations

Inlet & Exhaust Re-Line

Exhaust Only Re-Line

NOTE: You may use either re-line configuration with a masonry or zero-clearance fireplace.

CAUTION: The "Exhaust Only Re-line" is not covered under the appliance safety standard (ANSI Z21.88 CSA 2.33) used in the safety certification of this appliance. The safety certification does not apply to this installation. Before installing the appliance using this method, contact the Authority Having Jurisdiction to determine if this installation is acceptable in your area. This type of installation requires a minimum chimney cross section of 48 square inches.

Vent Connector Removal and Installation

- The vent connector is shipped attached to the insert, but may be removed to facilitate tight installations. See the directions below for installation.
- Route the flex vent through the chimney from above (leave an extra 3' at the top). Make sure the flex is thoroughly stretched.
 - Remove the vent connector and attach it to the flex vent (see the instructions on the following page).
NOTE: be careful of the anti-seize on the connector – it will stain clothing, etc.
 - Pull on the flex vent until the vent connector is at the same height as the insert. Temporarily attach the flex vent to the top of the chimney (leave extra slack).
 - Slide the insert into place, guiding the vent connector into the guides on top of the insert.
 - Attach the vent connector to the appliance (see the following page for details).
 - Remove any excess slack in the flex line and attach the vent termination.

Vent Connector Removal and Installation (continued)

The vent connector slides back and disengages from the three tabs on top of the insert.

Connect the flex vent (exhaust and intake) to the vent connector (use self-drilling screws or hose clamps).

The vent connector, when hanging from the chimney, may be grasped by reaching above the insert. Carefully move the connector forward, making sure all 3 tabs insert through the connector.

Secure the vent connector to the insert using the screw removed earlier.

Surround Panel Installation

NOTE: The insert may be installed without surround panels.

PANEL SIZE	HEIGHT	WIDTH	PART #
	25"	37"	96100543A (Aust. Only)

1. The insert should be in position with gas line and flue and intake connections attached, but pulled out slightly to allow panel installation.
2. Attach the surround panel to the insert as shown below.

Glass Frame Removal and Installation

The appliance must be completely cool before removing the glass.
Do not strike or slam the glass.

a

Open the four latches holding the glass frame in place (start with the two below the glass) - follow the directions shown to the right.

Glass Frame

Push in on the latch.

Twist 1/4 turn.

b

Lift the glass frame up and pull it forward to remove. **NOTE:**

You may need to lift the glass frame while re-attaching.

Re-Attaching the Glass Frame:

- Hang the glass frame on the firebox.
- While holding in place, attach the upper latches (follow the instructions to the right in reverse).
- Lift the glass frame slightly and attach the lower latches.

The latch will then disengage from the latch bracket.

Glass Frame Removal and Installation (continued)

The glass latch can come loose from the glass frame. This occurs when the latch is turned 1/8 turn when disengaged from the unit. Follow the directions below to re-install the latch if it comes loose.

Hold the latch at an angle and insert it into the slot on the glass frame. Note how the washer fits in front of the flange on the glass frame. You will need to push slightly to get the latch to insert.

Once fully inserted, turn the latch until it is level.

Face Installation

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.

If the barrier becomes damaged, the barrier shall be replaced with the manufacturer's barrier for this appliance.

The face includes the required barrier screen. Make sure it is in place during operation.

1. The insert should be in position with gas line and flue/intake attached. If using a surround panel, it should be attached as well.
2. Attach the face to the insert as shown below.

Face	Replacement Barrier Part #
Universal	95200172
Time Square	95200173
Designer	95200174

Log Installation

- ! The logs are fragile, especially after being exposed to heat.
- Make sure the gas control valve is "OFF" and the heater is cool prior to conducting service.
- Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.
- If using propane (LP), convert the appliance before installing the logs (see page 41).

Rear Log Placement

The rear log has two holes on the bottom. Place the log so the pins on the burner insert into the holes on the log (see photos below).

NOTE: There are two tabs located on the back wall of the firebox that may be bent by hand to help stabilize the rear log (see picture below).

Left Log Placement

The left log has one hole and one elevated pad on the bottom. Place the log so the pin on the burner inserts into the hole on the left end of the log. The right side of the log slides back until it touches the stop on the burner (see photos below).

Right Log Placement

The right log has two holes on the bottom. Place the log so the two pins on the burner insert into the holes on the log (see photos below).

Left Twig Placement

The left twig is the shorter twig (see photo below). The bottom of the twig has two holes. Place the twig so the pins on the rear and left log insert into the holes on the twig. The square hole should be over the pin on the left front log

Left Twig

Right Twig

Right Twig Placement

The right twig has two holes in the bottom that fit over the pin on the back and right log (see photos below). The lower side of the twig rests on the right log. Place the twig as shown below.

Rock Wool Placement

The included rock wool is placed on top of the burner to enhance the glow from the burner. **The rock wool works best when it is applied in a very thin, porous layer.** The best method for applying the rock wool is to brush it on to the burner. Compress a clump of rockwool between your thumb and forefinger. Use a stiff brush to apply a thin layer of rockwool fibers onto the burner. Do not use the entire bag of rockwool. Use only a small amount and save the remainder. Over-use of rockwool will diminish the glow and may cause sooting or other adverse conditions.

Ember Placement

Place a layer of embers along the edges of the burner, on top of rivets, and along the edges to enhance the aesthetics of the firebox. Do not place embers over any burner holes. See the photo to the right.

Steps for Finalizing the Installation

1. Remove the glass (see page 23).

NOTE: If using propane (LP) convert the appliance prior to installing the media.

2. We recommend you purge the gas line at this time (with the glass removed). This allows gas to be detected once it enters the firebox, ensuring gas does not build up.
3. Install the four AA batteries (included in the owner's pack) into battery holder (see illustration below). The AA batteries act as a power backup in case the household (AC) power goes out and are required for operation. The battery holder is held in place with Velcro to allow for removal.

Battery Installation

4. Turn on gas to the heater. Leak test all gas joints prior to starting the appliance. Start the pilot to verify gas supply (turn the pilot to continuous but leave the main burner off - see instructions on page 34). After verification, turn off the pilot and shut off gas to the appliance.
5. Install firebacks (if applicable). Install the log set (page 26).

6. Replace the glass.
7. Start the heater.
8. Leak test all gas joints.
9. Check the air shutter following the directions below.

Air Shutter Adjustment

Let the heater burn for fifteen minutes (make sure the media and glass are in place). The flames should be yellow with no sooting. Adjust the air shutter, if necessary, to achieve the correct looking flame.

Correct

Flames should be blue at the base, yellow-orange on the top.

Not Enough Air

If the flames are too tall or sooty on the ends, open the air shutter.

Too Much Air

If the flames are all blue and short, close the air shutter.

Air Shutter Lever

(use screwdriver to adjust)

Left = More Air (Open)

Right = Less Air (Closed)

10. Attach the face.
11. Adjust the flame to its highest position - the flames should not contact the top of the firebox. Check the flame on low position. The flames should burn off of each burner hole. If the heater does not work correctly, contact your Travis dealer for a remedy.
12. Give this manual to the home owner for future reference and fully explain operation of this heater.

Before You Begin

- Read this entire manual before you use your new heater (especially the section "Safety Precautions" on pages 4 & 5). Failure to follow the instructions may result in property damage, bodily injury, or even death.

Turn off the main gas supply to the appliance during appliance installation or maintenance.

During appliance installation or maintenance or in case of remote control malfunction turn off the main gas supply.

Location of Controls

To access the gas control valve, open the control door on the face. The controls are shown below.

Shutoff Valve	This valve shuts off gas to the insert.
On/Off Switch	This control is used to turn the heater on and off.
Continuous / Intermittent Pilot Switch	This switch controls how the pilot flame works: continuous; or, intermittent (pilot turns on and off with the burner). See the section "Continuous/Intermittent Pilot" for details.
Flame Adjust Knob	This knob controls the flame height from low ("LO") to high ("HI"). The pointer above the knob points to the position this knob is in.
Battery Tray – or - Optional Remote Receiver	The insert ships with a battery tray (backup power for power outages). If using the optional remote, the remote receiver replaces the battery tray (it also includes a switch that replaces the on/off switch).
Optional Blower Knob	This knob controls the speed of the internal convection blower that pushes the heated air into the room.

Starting the Heater for the First Time

- Burn the heater at a high setting with the blower off for an extended period (up to 48 hours). This will cure the painted surfaces. **Fumes** from the paint curing and oil burning off the steel will occur. This is normal. We recommend opening a window to vent the room.
- **Condensation** may appear on the glass each time you start the heater - this is normal.
- **Blue Flames** will occur on the heater when it first comes on. After fifteen minutes the flames will turn a more realistic yellow and orange color.

Turning the Heater On and Off

NOTE FOR OPTIONAL REMOTES, THERMOSTATS, OR WALL SWITCHES:

The on/off switch on the fireplace may be disabled (or left in the on or off position) when the heater is controlled by a remote, thermostat, or wall switch. Consult your installer or dealer for details.

ON/OFF SWITCH

Use this switch to turn the main burner on and off manually.

OPTIONAL REMOTE THERMOSTAT

See the instructions included with the remote for details on operation.

- Do not place any combustible items on top of or directly in front of the heater, even temporarily. The optional thermostat may start the heater causing a combustible item to ignite.
- If the heater turns on and off frequently while using the thermostat, you may want to adjust the flame height down until it produces just enough heat needed.

Adjusting the Flame Height

- Your heater has an adjustable flame to tailor the look and heat output to your needs. It is adjusted by turning the knob on the gas control valve.

Adjusting the Blower Speed (Optional)

The optional blower helps transfer heat from the heater into the room. It will not turn on until the heater is up to temperature (approximately 10 minutes after starting). See the illustration below for instructions on adjusting the blower speed.

Continuous/Intermittent Pilot Switch

This heater may run with the pilot continuously running or in intermittent mode. For most homeowners, the intermittent mode is preferred (this saves fuel, doesn't give off un-needed heat). However, in some situations the homeowner may prefer to switch the heater to continuous pilot. The most typical reasons for switching to continuous pilot are:

- **Very Cold Conditions** – in very cold conditions you may notice that the burner does not light quickly, and the flames lift off the burner. If this is situation, we recommend you switch to continuous pilot. This will create a slight draft in the vent, allowing for the burner to light quickly and draft correctly.
- **Excessive Condensation on Glass After Startup** – certain installations may encounter excessive fogging on the window after startup (not just the first time the heater was started). This is an aesthetic condition that may be remedied by switching the heater to continuous pilot.
- **Cold Glass or Heater Front** – in very cold conditions you may notice that the heater front and glass become very cold. To remedy this, switch the heater to continuous pilot.
- **Frequent On / Off Operation** – if you are frequently turning the heater on and off, you may wish to leave it in continuous pilot. This allows the burner to turn on more quickly, without pilot ignition delay.

Power Outages

The heater will work if household current (AC power) is disconnected.

Normal Operating Sounds

Extinction Pops

It is not unusual, especially on Propane (LP) appliances, to experience a "pop" when the burner is shut off.

Pilot Assembly

The pilot flame will make a slight whisper sound.

Gas Control Valve

As the gas control valve is turned on and off and the flame height changed you will hear the flame height motor.

Optional Blower

This heater has an optional blower to push heated air into the room. You will hear the sound of air movement that increases as the speed is increased.

The appliance may creak with change of temperature -- THIS IS NORMAL.

Optional Blower Snap Disk

This part can produce a clicking sound as it turns the blower on and off.

Normal Operating Odors

This appliance has several areas that reach high temperatures. Dust or other particles on these areas may burn and create an odor. This is normal during start-up. You may notice the smell is more acute if the appliance was left idle for a long period.

DANGER HIGH VOLTAGE: Disconnect power before attempting maintenance or repair.

Maintaining Your Heater's Appearance

The appliance must be completely cool prior to conducting service.

Cleaning The Glass

The glass may be cleaned with a non-abrasive cleaner. To clean the inside of the glass, simply remove the glass frame, place it on a non-scratching surface, and clean the surface.

Cleaning the Face and Panels

Use a duster to remove dust from the face and panels. Contact your dealer if you wish to re-paint any surfaces. Heat-resistant stove-paint (with instructions) is available from your dealer.

Yearly Service Procedure

- Failure to inspect and maintain the heater may lead to improper combustion and a potentially dangerous situation. We recommend the following procedures be done by a qualified technician.
- 1. Turn the pilot flame to continuous. It should touch approximately 3/8" of the top of the flame sensor. If it does not, contact your dealer for service.
- 2. Shut off gas to the heater and let it cool for 15 minutes. Remove the glass (see page 23). Glass may be cleaned with glass cleaner and a soft cloth (do not use abrasive cleaners).
- 3. Remove the media (see the instructions included with your media kit). If severely deteriorated, replace. Check the media for sooting. A small amount of soot along the bottom of the media is normal. If excessive sooting is found, the heater will require adjustment. Contact your dealer.
- 4. Inspect the burner and remove any debris.
 - Make sure the burner is not warped, cracked, or damaged.
 - Check the firebox and area around the pilot to make sure there is no warping or damage.
 - If any problem is found, discontinue use and contact your dealer for service.
- 5. Replace the media. Clean and replace the glass. If the glass is damaged, replace. Make sure the gasket along the perimeter of the glass contacts the face of the firebox and forms an air-tight seal. If it does not, re-align or replace the gasket to insure an air-tight seal.
- 6. Inspect the area behind the access door. Clean if necessary. Check the gas control valve and the gas lines. If damage is found, discontinue use and contact your dealer for service. Clean the air channels, ducts, and blower (if applicable).
- 7. Start the main burner. Inspect the main burner and pilot flame. After 15 minutes the flames should be orange/yellow and not touch the top of the firebox. If the pilot or main burners do not burn correctly, contact your dealer for service. Monitor blower operation.
- 8. Remove any debris or vegetation near the vent termination. Contact your dealer if any sooting or deterioration is found near the vent termination. Venting system should be examined by a qualified agency.

Troubleshooting Table

Problem:	Possible Cause:	Don't Call for Service Until You:
Main Burners Will Not Start	The ON/OFF switch is turned to "OFF"..... The remote control is not working correctly..... The thermostat is disconnected or set too low..... No Propane in Tank.....	Turn the ON/OFF switch to "ON" See the remote control instructions See "Thermostat Operation" Check Tank Level
Receiver Beeps	The power backup batteries are dead.....	Replace the batteries (see page)
Heater Beeps	The power backup batteries are dead (heater will beep once repeatedly)..... The heater encountered an error when trying to start (heater beeps 3 times repeatedly) The heater encountered a pilot error (heater beeps 2 times repeatedly)	Replace the batteries (see page 30) Make sure gas is turned on. Turn heater off for 5 seconds (make sure standing pilot is off) – then turn back on. Contact your dealer if this occurs.
Optional Blower Does Not Turn On	The heater is not getting electricity..... The heater is not up to temperature.....	Check the breaker switch Let the heater burn for at least 15 minutes
Flames Are Too Blue	The heater has just been started..... Improper air shutter adjustment.....	This is normal - see "Starting the Fireplace for the First Time" Adjust Air Shutter - contact your dealer
Flames Are Too Short (Under 6")	The flame height may be turned too low.....	Turn the flame height to "HI" - See "Adjusting the Flame Height"
Thin Layer of Soot Covers the Glass	The media is placed incorrectly..... Improper air shutter adjustment.....	See " Media Installation" Adjust Air Shutter - contact your dealer

Replacement Parts List

Caution: Use only Travis Industries replacement parts. Do not use substitute materials.

Warning: Do not operate appliance with the glass front removed, cracked, or broken. Replacement of the glass should be done by a licensed or qualified service person.

Replacement Glass Part # 250-00256

Contact your local Travis Industries Dealer for Replacement Parts

Wiring Diagram

Caution: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.

Verify proper operation after servicing.

NOTE: IPI/CPI Switch may not be available in Australia

Safety Label

The safety (listing) label is attached to the operating tag (chained to the heater near the gas control valve). A copy is shown below

Radiant Plus Small GSB2 (Au)
Vented Gas Fireplace Heater

Tested to the combustion performance and construction requirements of AS/NZS 5263.1.3 Gas Space Heating Appliances. This appliance must be installed in accordance with all local codes. This Radiant Plus Small GSB2 appliance is equipped from the factory only for use with Natural Gas and is only for use with the type of gas indicated on the rating plate. For conversion to LP (Propane) use a certified kit supplied by the manufacturer. See owner's manual for information on making these changes.

This appliance may be installed in an aftermarket, permanently located, manufactured (mobile) home where not prohibited by local codes.

This vented gas fireplace heater is not for use with air filters. This appliance must be properly connected to a venting system in accordance with the manufacturer's installation instructions. Use only approved co-linear direct vent systems to vent this appliance to the exterior. See owner's manual for approved brands of venting.

WARNING: Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to the owner's information manual provided with this appliance. For assistance or additional information consult a qualified installer, service agency or the gas supplier.

This appliance is a Vented Gas Fireplace Heater. Not for use with Solid Fuel.

Young children should be carefully supervised at all times when they are in the same room as the appliance.

Minimum Clearances to Combustibles			
Enclosure minimum height	17.375" (442mm)	Base of insert to mantel	See owner's manual
Enclosure minimum width	24" (610mm)	Base of insert to top facing	See owner's manual
Enclosure minimum depth	13.25" (337mm)	Minimum chimney flue size	7" (178mm)

FAN TYPE VENTED CIRCULATOR			
Blower Electrical Rating: 240V, 1.5 Amps, 50 Hz, 150 Watts			
	L.P.	N.G.	L.P.
Input Rate on "HI" (MJ/h)	19.5	19.5	2.74
Input Rate on "LO" (MJ/h)	10.6	11.9	3.23
Orifice Size - (DMS)	1.25mm	#47	2.68
		Minimum Inlet Pressure (kPa)	1.13
		Maximum Inlet Pressure (kPa)	1.74
		Manifold Pressure on "HI" (kPa)	.95

This appliance is equipped for installation 0-610 m. For altitudes above 600m, the vent configuration, orifice, or combination of both may need to be changed. See owner's manual for information on making these changes.

MANUFACTURE DATE: ☐ 2018 ☐ Jan. ☐ Apr. ☐ Jul. ☐ Oct. ☐ 2019 ☐ Feb. ☐ May ☐ Aug. ☐ Nov. ☐ 2020 ☐ Mar. ☐ Jun. ☐ Sep. ☐ Dec.	Manufactured by: TRAVIS INDUSTRIES HOUSE OF FIRE 12521 Harbour Reach Dr. Mukilteo, WA 98275	Certificate Holder: Dragon Wholesaling Pty. Ltd. Unit 4, 16 Lexington Drive Bella Vista NSW 2153 Australia
--	---	---

www.lopi.com.au

Register your **Dragon Wholesaling** Limited 7 Year Warranty online at lopi.com.au or complete the enclosed Warranty card and mail it within **ten (10)** days of the appliance purchase date to: Dragon Wholesaling Pty. Ltd. Unit 4, 16 Lexington Drive Bella Vista NSW 2153 Australia. **Dragon Wholesaling** warrants this gas appliance (appliance is defined as the equipment manufactured by Travis Industries, Inc.) to be defect-free in material and workmanship to the original purchaser from the date of purchase as follows:

Check with your dealer in advance for any costs to you when arranging a warranty call.
Mileage or service charges are not covered by this warranty. This charge can vary from store to store.

Component	Years 1 & 2 Parts & Labor	Years 3 Through 5 Parts & Labor	Years 6 & 7 Parts Only
Burner Assembly Burner Pan Assembly, Air Shutter Assembly, Main Burner Orifice	✓		
Electrical Assembly (within heater structure): Wiring harness, snap discs, rheostat speed control, blowers, etc.	✓		
Gas Control Assembly Adjustable control valve, fireplace controller, pilot assembly and pilot wiring	✓		
Glass Glass (breakage from thermal shock)	✓		
Media Log Set, Embers, Stones, Crushed Glass	✓		
Gold, Nickel & Copper Plating Face & Door (see "Conditions and Exclusions" # 9)	✓		
Accessories Firebacks, Power Heat Ducts, Andirons, etc...	✓		
One-Way Freight Allowance One-way freight allowance on pre-authorized repair done at factory is covered.	✓	✓	
Convection Heat Exchanger Convection heat exchanger assembly	✓	✓	
Firebox Assembly Adjustable Air Restrictor, Pressure Relief Mechanisms, Glass Attachment Mechanism	✓	✓	✓

EXCLUDED COMPONENTS: Paint, Gasketing, and Accent Light Bulbs

CONDITIONS & EXCLUSIONS

- This new gas appliance must be installed by a qualified gas appliance technician. It must be installed, operated, and maintained at all times in accordance with the instructions in the Owner's Manual. Any alteration, willful abuse, accident, neglect, or misuse of the product shall nullify this warranty.
- This warranty is nontransferable, and is made to the ORIGINAL purchaser, provided that the purchase was made through an authorized TRAVIS dealer.
- Discoloration and some minor expansion, contraction, or movement of certain parts and resulting noise, is normal and not a defect and, therefore, not covered under warranty. The installer must ensure the appliance is burning as per the rating tag at the time of installation. Over-firing (operation above the listed BTU rate) of this appliance can cause serious damage and will nullify this warranty.
- The warranty, as outlined within this document, does not apply to the chimney components or other Non-Travis accessories used in conjunction with the installation of this product. If in doubt as to the extent of this warranty, contact your authorized TRAVIS retailer before installation.
- Travis Industries will not be responsible for inadequate performance caused by environmental conditions such as nearby trees, buildings, roof tops, wind, hills or mountains or negative pressure or other influences from mechanical systems such as furnaces, fans, clothes dryers, etc.
- This Warranty is void if:
 - The unit has been operated in atmospheres contaminated by chlorine, fluorine or other damaging chemicals.
 - The unit is subject to submersion in water or prolonged periods of dampness or condensation.
 - Any damage to the unit, combustion chamber, heat exchanger or other components due to water, or weather damage which is the result of, but not limited to, improper chimney/venting installation.
- Exclusions to this 7 Year Warranty include: injury, loss of use, damage, failure to function due to accident, negligence, misuse, improper installation, alteration or adjustment of the manufacturer's settings of components, lack of proper and regular maintenance, damage incurred while the appliance is in transit, alteration, or act of God.
- This 7 Year warranty excludes damage caused by normal wear and tear, such as paint discoloration or chipping, worn or torn gasketing, corroded or cracked logs, embers, etc. Also excluded is damage to the unit caused by abuse, improper installation, modification of the unit, drilling of the orifices, or the use of fuel other than that for which the unit is configured. Units are shipped for natural gas and must be converted to propane using the included conversion kit. Confirm fuel configuration with your installer.
- Damage to gold or nickel surfaces caused by fingerprints, scratches, melted items-, or other external sources left on the gold or nickel from the use of cleaners other than denatured alcohol is not covered in this warranty.
- TRAVIS INDUSTRIES, INC. is free of liability for any damages caused by the appliance, as well as inconvenience expenses and materials. Incidental or consequential damages are not covered by this warranty. In some states, the exclusion of incidental or consequential damage may not apply.
- This warranty does not cover any loss or damage incurred by the use or removal of any component or apparatus to or from the gas appliance without the express written permission of TRAVIS INDUSTRIES, INC. and bearing a TRAVIS INDUSTRIES, INC. label of approval.
- Any statement or representation of TRAVIS products and their performance contained in TRAVIS advertising, packaging literature, or printed material is not part of this 7 year warranty.
- This warranty is automatically voided if the appliance's serial number has been removed or altered in any way. If the appliance is used for commercial purposes, it is excluded from this warranty.
- No dealer, distributor, or similar person has the authority to represent or warrant TRAVIS products beyond the terms contained within this warranty. TRAVIS INDUSTRIES, INC. assumes no liability for such warranties or representations.
- Travis Industries will not cover the cost of the removal or re-installation of hearths, facing, mantels, venting or other components.
- If for any reason any section of this warranty is declared invalid, the balance of the warranty remains in effect and all other clauses shall remain in effect.
- THIS 7 YEAR WARRANTY IS THE ONLY WARRANTY SUPPLIED BY TRAVIS INDUSTRIES, INC., THE MANUFACTURER OF THE APPLIANCE. ALL OTHER WARRANTIES, WHETHER EXPRESS OR IMPLIED, ARE HEREBY EXPRESSLY DISCLAIMED AND PURCHASER'S RECOURSE IS EXPRESSLY LIMITED TO THE WARRANTIES SET FORTH HEREIN.

IF WARRANTY SERVICE IS NEEDED:

- If you discover a problem that you believe is covered by this warranty, you MUST REPORT it to your TRAVIS dealer WITHIN 30 DAYS, giving them proof of purchase, the purchase date, and the model name and serial number.
- Travis Industries has the option of either repairing or replacing the defective component.
- If your dealer is unable to repair your appliance's defect, he may process a warranty claim through TRAVIS INDUSTRIES, INC., including the name of the dealership where you purchased the appliance, a copy of your receipt showing the date of the appliance's purchase, and the serial number on your appliance. At that time, you may be asked to ship your appliance, freight charges prepaid, to TRAVIS INDUSTRIES, INC. TRAVIS INDUSTRIES, INC., at its option, will repair or replace, free of charge, your TRAVIS appliance if it is found to be defective in material or workmanship within the time frame stated within this 7 year warranty. TRAVIS INDUSTRIES, INC. will return your appliance, freight charges (years 1 to 5) prepaid by TRAVIS INDUSTRIES, INC., to your regional distributor, or dealership.
- Check with your dealer in advance for any costs to you when arranging a warranty call. Mileage or service charges are not covered by this warranty. This charge can vary from store to store.

LP (Propane) Conversion Instructions

**WARNING**

This conversion kit shall be installed by a qualified service agency in accordance with the manufacturer's instructions and all applicable codes and requirements of the authority having jurisdiction. If the information in these instructions is not followed exactly, a fire, explosion or production of carbon monoxide may result causing property damage, personal injury or loss of life. The qualified service agency is responsible for the proper installation of this kit. The installation is not proper and complete until the operation of the converted appliance is checked as specified in the manufacturer's instructions supplied with the kit.

Caution: The gas supply shall be shut off prior to disconnecting the electrical power, before proceeding with the conversion.

Note: Convert the appliance prior to installing the gas line to ensure proper gas use.

The conversion kit contains the following items:

Description	SKU#
LP Burner Orifice – (1.25mm)	250-02008
LP Pilot orifice – (0.14)	250-02763
LP Regulator	250-00415

1. Remove the glass frame. Remove the logs (if installed).
2. Use a 1/4" nutdriver to remove the 4 screws holding the burner in place.

3. Remove the burner and place it aside.

4. Install the LP (propane) pilot orifice following the instructions below.
 - (a) Use a 7/16" open-end wrench to remove the pilot hood.
 - (b) Remove and discard the Natural Gas (NG) orifice. Place the LP orifice in the pilot assembly then replace the pilot hood, tightening the pilot hood until it is snug (do not over-tighten).

- Remove the burner orifice and discard. Install the LP (propane) orifice.

Ⓐ Remove the manifold cover to allow access to the burner orifice. Then slide the air shutters to provide additional room.

Ⓑ Use a 9/16" wrench to secure the manifold while removing the orifice with a 1/2" wrench.

Ⓒ Apply thread sealant to the LP orifice prior to installation. Use the chart below to identify the correct orifices.

Ⓓ Screw the LP orifice until orifice protrudes 15/16" (23.8mm) indicating full insertion (use wrench to secure manifold when re-attaching orifice).

	LP	NG
Small	1.25mm	#47

- Replace the regulator following the instructions included with the regulator kit. Remove and discard the screws (see "a" below) holding the stock regulator in place (see "b" below). Remove the stock regulator and gasket (see "c" below). Place the LP regulator in place, making sure the pre-fitted gasket (see "c" below) is in place – **make sure it is correctly oriented**. Secure using the screws included with the motor – tighten to 25 Lb-inches. **Leak test this area after installation to verify proper installation**. There is a label on the base of the regulator knob indicating regulator type (NG or LP). Place the included label on the valve body where it can be easily seen to insure proper identification ("d").

- Replace the firebox components to restore the appliance to the correct configuration.
- See the section "Steps for Finalizing the Installation" for instructions on starting the appliance and verifying correct operation (remove glass, bleed gas line, leak test gas connections, start the heater, inspect pilot flame, adjust air-shutter, and inspect burner performance). Verify gas output pressure (manifold pressure) at this time (see the section "Gas Line Requirements" for details).

Optional Remote

Installation

- 1 Disconnect the power cord Molex connector from the Electronic Controls Assembly.
- 2 GSB2 units require the electronic controls assembly (IFC) to be removed to allow access to the wiring and controls. Using an 11/32" wrench to loosen the nut on the left side that holds the Electronic Controls Assembly in place (see picture in step 3).
- 3 Remove the assembly by slightly lifting the right side and slide it to the right. This will disengage the main connector from the valve. Once the Electronic Controls Assembly is disconnected from the valve, slide it forward, out of the appliance. The pilot wires will still be connected and are long enough allow the assembly to be pulled clear of the unit. Make sure not to damage the pilot wires.

Loosen 11/32" Nut.

Lift this side up slightly and slide assembly to the right.

This connection will disengage as the assembly moves right. The assembly can then be removed as shown below.

- 4 Loosen the two screws that hold the heat shield on the Electronic Controls Assembly and lift the front of the heatshield until you can disengage the rear leg of the heat shield from the back of the Electronic Controls Assembly. Slide the grommet, holding the pilot wires, out of the rear leg on the heat shield. Remove the heat shield and set it aside for reinstallation.

- 5 Disconnect the red and black wires that attach to the battery holder by separating the white Molex connector as shown below. Once the wires are disconnected, remove and discard the battery holder which is held in place with hook and loop tape.

Remove and

- 6 Remove the receiver from the mounting bracket. Use the two screws in the following step. Discard the mounting bracket.

Remove and discard

- 7 Install and screw the receiver to the Electronic Controls Assembly housing using the two Philips head screws removed in the previous step.

- 8 Locate the on/off switch on the appliance. Access the back of the switch and remove the green and white wires. Remove the switch from its mounting location. Install the switch blank (included with the remote kit) into the empty mounting hole where switch was removed.

- 9 Follow the green and white wires from the back of the on/off switch, to where they attach to the control module. Disconnect the green, plastic connector with wires attached from the control module by lifting straight up (location is marked X4 on the module). Remove the connector and wires from the unit and discard.

- 10 Install the system jumper into the same location on the board that you removed the green connector in the previous step.

- 11 Run the end of the included wire harness with (4) wires to the control module. Insert the connector into the "X8 User Interface" location on the module.

- 12 Connect the flat, white connector to the back of the included remote battery box. Make sure the two guides are on the top of the connector when inserting it into the battery box.

- 13 Attach the remaining connector with the red and black wires to the wire harness where the battery box was disconnected from in step 4.

- 14 Attach the receiver to the appliance (see owner's manual for details).

- 15 Install the included (4) AA batteries into the receiver.
- 16 Install the included (3) AAA batteries into the transmitter.
- 17 See operating instructions, included with the remote kit, for details on how to synchronize the transmitter to the control module.
- 18 Re-install the pilot wire grommet onto the heat shield.
- 19 Re-install the heat shield over the top of the Electronic Controls Assembly.
- 20 Re-install Electronic Controls Electronic Controls Assembly and the Glass Electronic Controls Assembly.
- 21 Reconnect the power cord that was disconnected in step 3.
- 22 **Verify no wires are touching firebox bottom, adjust if necessary.**
- 23 Plug power cord into a grounded outlet and install 4AA batteries into the receiver.
- 24 Sync the remote with the receiver (see syncing instructions in operation instructions that comes with the kit).

Blower Service Instructions

WARNING:

Disconnect power to the blower before servicing (unplug power cord or turn off service breaker).

The blower assembly may be removed while leaving the wires connected. Slide the blower forward off of the grommets, being careful to not damage or disconnect any wiring (see illustration above). The blower may be vacuumed or brushed clean. Re-install the blower after cleaning, making sure the blower base inserts into the grommets. Make sure all wiring remains connected and does not contact any hot or moving components.
